INTERNSHIP FINAL REPORT AT CTOS BASIS

INFO

Presenter: Nu'man Nabil bin Nazri
Student ID: 2024340793
Position: Operations Assistance Intern
Department: CTOS Basis
Program: Bachelor of Business Administration (Hons.) Investment Management

TIME

DURATION
9 MARCH 2026 - 21 AUGUST 2026

.....

EXECUTIVE SUMMARY

Start

This report will give an accurate account of my internship experience at CTOS Basis, Petaling Jaya, Selangor as an Operations Assistance Intern for 24 weeks at the Menara CelcomDigi. The primary aim of this report is to demonstrate how I adjusted to the working environment of a real corporate structure, how I came to meet and work with a variety of people, and the development of my personal skills and financial knowledge in these 24 weeks. I was assigned to the Corporate Data Division and my job was to support and review business credit databases for companies in Malaysia and Singapore. I worked closely with the team that was based in Petaling Jaya and had to ensure that our financial data was accurate because it would get typed in by me and double checked by them; they had to check my company profiles and research legal cases to ensure the data in the database was completely correct.

In this report you will get my profile, the CTOS profile, a detailed training experience analysis, and a detailed SWOT analysis. I conducted a SWOT analysis to examine the strengths and weaknesses, opportunities and threats that is facing the company in the market so as to understand the position in which the company is in the market and give them some realistic tips on how they can improve. There are some positive aspects for CTOS, however, as it has more than 70% of the marketplace share and maintains a very huge database that maintains millions of consumers and businesses. The biggest problems they face, however, are their high technology infrastructure costs, and the fact that they still have a significant amount of manual data entry. In the future, CTOS has a lot of potential to expand its business in other ASEAN countries and move towards software subscription model.

Meanwhile, there are major competitive challenges posed by foreign competitors who are cutting prices and altering data privacy regulations that affect the ability to gather legal records. In general, this is my reflection on how I performed and how I see CTOS continuing to improve in the future.

ACKNOWLEDGEMENT

Start

As always, Alhamdulillah, praise be to Allah S.W.T, I am very blessed to be able to finish my industrial training without having any problem of health and with a sound mind and body to enable me to go through my internship without stress and excitement. I profoundly appreciate the blessings of the Almighty towards me that I completed this industrial training report successfully. A special thanks to my parents who have always been encouraging and praying for me through all the industrial training years.

I would like to express my sincere appreciation to my supervisor, Mr. Cheng Yen Ming Manager of Operations, for his invaluable assistance, wealth of information, helpful comments and guidance to me throughout the industrial training period. I was encouraged every day by his continual encouragement. Of course, a special mention goes to Mr. Puvendran a/l Sangaran who is the Chief Executive Officer of CTOS Basis, the executive operations team, researchers, assistants, and the operation analysts, particularly Rishmin, Nurin, Nurul Syazwani, Aemiliya, and Shamilah for offering me the required advice, guidance, and warm hospitality during the practical training. I can't thank all the staff at CTOS Basis enough for making me feel like I was a very welcome, comfortable person on the premises, as an intern.

Last but not least, I would like to thank my industrial training university advisor Dr. Juliana Binti Mohamed Abdul Kadir for his willingness to guide me at every turn when I had questions throughout my industrial training. I'm deeply grateful for their effort of sparing their time to consult and check this industrial training report. Their understanding, encouragement and help throughout the process of completing this report is very important to me. Finally, I'm thankful to all my friends who were always here to support and encourage me. I am so blessed to have had them share their wisdom, knowledge and encouragement during these 24 weeks. It has really been one of the most valuable and memorable experiences of my life.

SUMMARY

Investment Management final-year student and current Financial Data Intern at CTOS Basis with a strong foundation in corporate financial analysis, data integrity, and market research. Proven expertise in auditing and processing comprehensive financial statements (P&L, Balance Sheets, Cash Flows) and complex corporate structures for both local and international (Singapore) enterprises. Highly proficient in utilizing advanced Excel (VLOOKUP, financial modeling) and corporate data systems to manage bulk data verification and risk assessment. Actively seeking a full-time, entry-level role as a fresh graduate in investment analysis, credit risk, or corporate finance where analytical precision and data-driven insights are required.

EDUCATION

Bachelor of Business Administration (Hons.) Investment Management — **March 2024 -August 2026**
- Universiti Teknologi MARA (UiTM) Segamat, Johor
- Current CGPA 3.41

Diploma in Investment Analysis — **October 2021 - February 2024**
Universiti Teknologi MARA (UiTM) Dungun, Terengganu
- CGPA 3.23
- MUET Band 4

WORK EXPERIENCE

CTOS BASIS INTERNSHIP (Financial Data Assistance) — **March 2026 - August 2026**
- Analyzed and processed comprehensive financial statements (P&L, Balance Sheets, and Cash Flows) for regional SMEs and major corporations across Malaysia and Singapore, maintaining a high standard of data accuracy.
- Executed corporate due diligence by auditing and updating complex shareholder structures, share capital, and management profiles within the core CTOS database.
- Streamlined the end-to-end reporting workflow by migrating raw legal and financial data into the proprietary CTOS platform to generate official credit reports.
- Mitigated credit reporting risks by researching, verifying, and documenting active litigation cases and corporate charges against entities and directors.

Shopee SPX (Sorter / Warehouse Assistant) — **July 2025 - September 2025**
- Operations Assistant (Quality Control focus).

GRABFOOD Delivery Rider — **Feb 2023 - September 2024**
- Demonstrated strong multitasking abilities by coordinating multiple pickups and navigating complex urban environments safely and efficiently.

KFC (Service Crew) — **Jun 2021 - Octorber 2021**
- Managed cash register operations and food preparation including cooking and assembling orders while strictly following corporate SOPs. Efficiently managed multi platform merchant orders including GrabFood, ShopeeFood, and Foodpanda with high attention to detail.

EXTRACURRICULAR

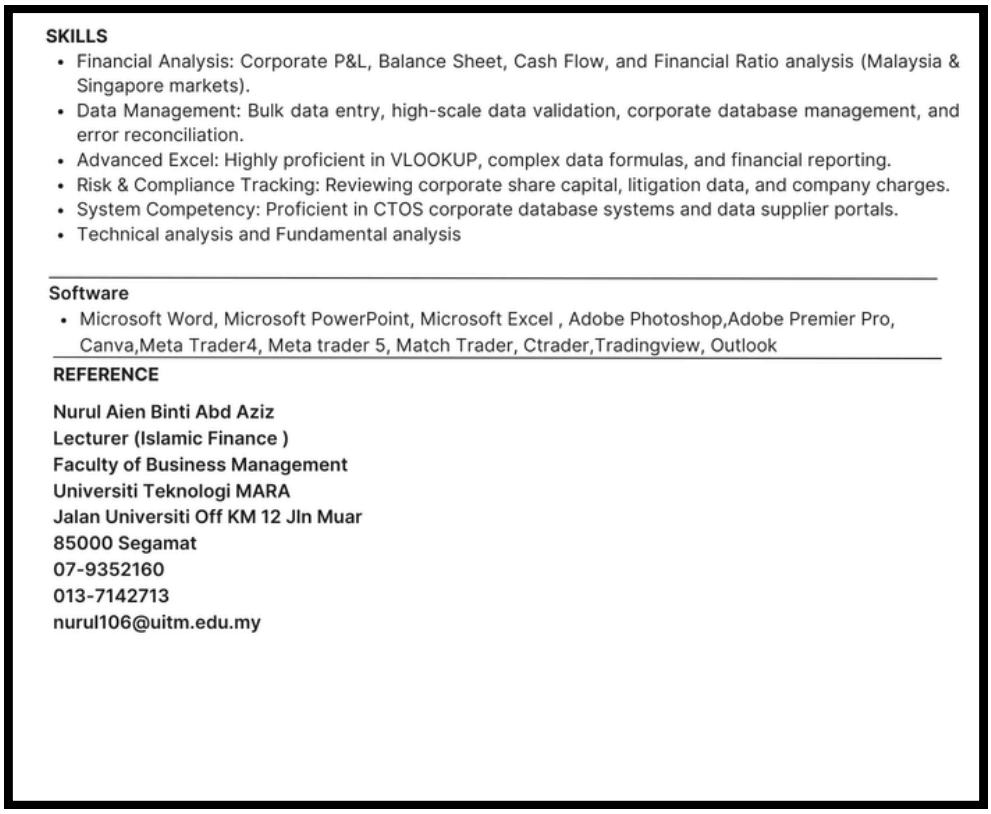

Fundamental VS Technical Workshop — **November 2025**
- Gaining comparative insights investment analysis and market strategies

Digital Marketing : Tips and Strategy — **June 2024**
- Engaged in a seminar on Digital Marketing strategies facilitated by Universiti Teknologi MARA to enhance understanding of current marketing trends and tips.

FIGURE 1 : STUDENT RESUME

STUDENT PROFILE

Start

SKILLS

- Financial Analysis: Corporate P&L, Balance Sheet, Cash Flow, and Financial Ratio analysis (Malaysia & Singapore markets).
- Data Management: Bulk data entry, high-scale data validation, corporate database management, and error reconciliation.
- Advanced Excel: Highly proficient in VLOOKUP, complex data formulas, and financial reporting.
- Risk & Compliance Tracking: Reviewing corporate share capital, litigation data, and company charges.
- System Competency: Proficient in CTOS corporate database systems and data supplier portals.
- Technical analysis and Fundamental analysis

Software

- Microsoft Word, Microsoft PowerPoint, Microsoft Excel , Adobe Photoshop,Adobe Premier Pro, Canva,Meta Trader4, Meta trader 5, Match Trader, Ctrader,Tradingview, Outlook

COMPANY PROFILE

Start

FIGURE 2 COMPANY LOGO

FIGURE 3 COMPANY OFFICE

2.1 Company Profile

The company's identity is declared and background is given.CTOS Basis Sdn. Bhd. is a special purpose business to business B2B service provider and is a wholly owned subsidiary of CTOS Digital Berhad. The company is based in Menara CelcomDigi in Petaling Jaya, Selangor, and is a key player in the financial ecosystem, providing global commercial credit information, comprehensive company profiling and localised risk analytics.

CTOS Basis specializes in providing financial institutions, multinational corporations and small and medium enterprises (SMEs) with trading risk assessment, counterparty exposure monitoring and safe credit decision making services in Malaysia and Singapore. CTOS dominates the domestic credit reporting market with more than 70% of the market share, and has amassed a huge database of information about approximately 15 million consumers and 8 million business entities.

2.2 Vision and Mission

Vision

-To make Malaysia a centre of excellence for credit reporting in ASEAN.

Mission

-To empower individuals and businesses with the confidence to make sound credit decisions through access to data and insights at greater ease and speed, leading the community to better financial health.

The subsidiary of CTOS Digital Berhad, CTOS Basis adopts and supports the Group's vision, mission, and corporate purpose while delivering business-to-business (B2B) credit reporting, commercial intelligence, and risk management solutions.

COMPANY PROFILE

Start

2.3 Leadership (CEO)

The company's strong executive leadership helps it sustain its market leadership and also to be the leader in digital innovation. The Chief Executive of CTOS Basis is Puvendran a/l Sangaran. During his tenure, the company has prioritized expanding its corporate data business, growing its regional presence, and efforts to modernize conventional credit reporting to streamline and data-driven software solutions.

2.4 Financial Performance & Revenue:

CTOS has shown impressive financial performance with a high demand for digital risk management products.The total gross money collected by the company is a record RM326.1mil, which demonstrates its huge commercial penetration and client retention capabilities.

International Expansion Revenue saw 17.5% growth, contributing to a significant RM46.1 million in the brand's international business sector, where it is selling credit data and scoring solutions in Indonesia and the Philippines. Financial Outlook, Revenue levels are still at record levels, but profit margins are coming under strain as large investments in technology are continuously being made, together with investments in the cloud and the processing of legacy data manually.

COMPANY PROFILE

Start

2.5 Product and Services

CTOS Basis' suite of business intelligence and risk management tools safeguards businesses against financial losses.

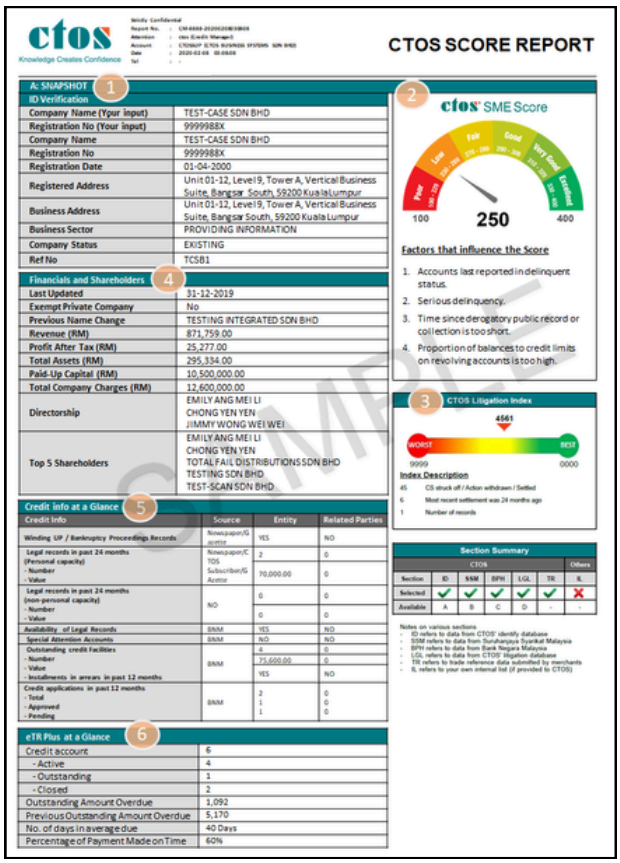

FIGURE 4 EXAMPLE SME REPORT

Their main services comprise:

- **Company Search**: Instant retrieval of business details, registration information, and ownership structures.
- **Business Report**: profiles which have been created in great detail for commercial analysis and evaluation of a business' financial health.
- **Litigation Check**: Direct tracking and indexing of the active litigation, bankruptcy proceedings or legal action against a company/director.
- **Malaysia Credit Report**: In-depth corporate credit scoring information, payment history, and historical default evaluation for Malaysia.
- **International Credit Report**: International business verification, international risk reporting for cross-border business.
- **Business Listing**: Verified directories for target B2B leads and business verifications.
- **Credit Monitoring**: These are automated and continuous monitoring systems which notify clients whenever there is a sudden change in a partner's credit score.
- **Credit Bureau**: Data sharing and aggregation from different networks to monitor payment behaviour in real time.
- **Recovery Programs of Reinforcement of Good Payment**: Recovery programs designed to promote good payment made by the corporate debtors so as to have a clean public record.

ORGANIZATIONAL CHART

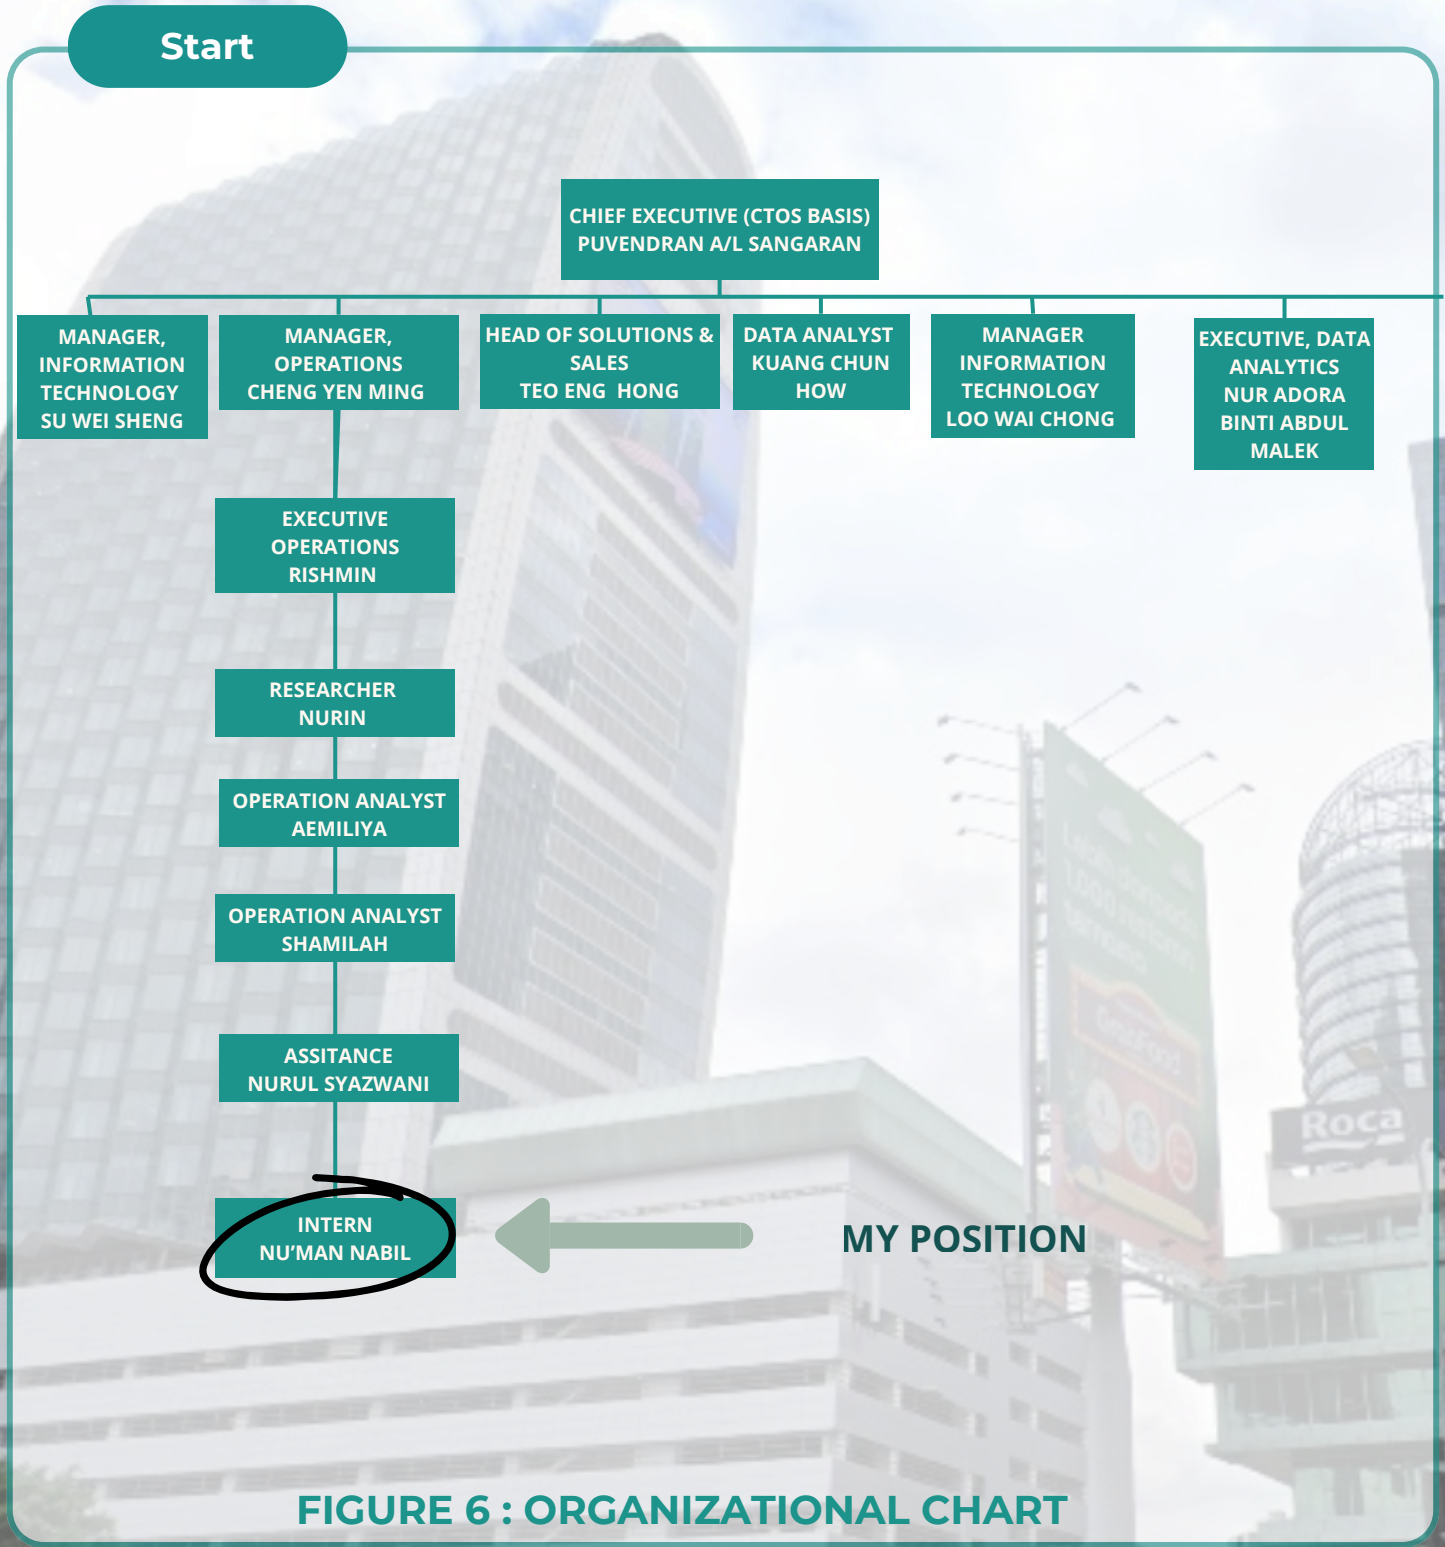

FIGURE 6 : ORGANIZATIONAL CHART

TRAINING REFLECTION

Start

3. Training Reflection

3.1 Role Overview and Daily work

As an intern in the Corporate Data Division of CTOS Basis, Petaling Jaya, I became exposed to the back end functions of business-to-business (B2B) corporate intelligence. As an Operations Assistance Intern, working with my operations manager, Ms. Cheng Yen Ming, it was imperative that I have a complete focus on the data accuracy. I knew that my top priority was to ensure there were no data entry errors, or what I called a zero data entry error rate, because that's the information that the major banks and multi-national companies are using to make huge decisions.

3.2 Core Technical Tasks and Learning Experience

1. This course is designed for students wishing to learn how to enter and calculate financial data and ratios in advance.

My main tasks on the job were to review the companies' audited corporate financial reports from Malaysia and Singapore. I was able to get raw data from the Profit & Loss (P&L) statement, the Balance Sheet, and the Cash Flow statements and enter them directly into the master system database.This wasn't just about inputting information; it was a hands-on opportunity to determine a company's financial well-being by working with financial ratios and calculations, including liquidity, debt to equity, and profitability ratios. It was very interesting to work with real-life corporate data and apply the financial theories I had acquired at University, and to understand how the operational decisions of a business can be reflected in the financial data.

2. Carrying out Bulk Orders for Corporate Clients.

Ms. Cheng Yen Ming, our manager, tasked me with a very intensive part of my training work, which was to deal with bulk orders. I had to coordinate the processing of the pipeline of data when large institutional clients requested credit assessments or background screens for hundreds of vendor or vendor-prospect profiles at one time. By handling these bulk orders, I sharpened my time-management skills, and learned how to be extremely accurate even with a very heavy workload.

TRAINING REFLECTION

Start

3. Database Entity Verification (Existing vs Non-Existent Companies)

I did a number of database entity verifications to ensure the integrity of the master database. When I got a new corporate profile or search request, I needed to go through our system's database and see if the company was already in our database or not. It included cross-referencing the names of the companies as they existed in the past, the historic addresses and the company registration numbers .

4. Legal & Compliance Auditing

I was also instructed to examine public court records and flag and document any active court cases, judgments and charges against any corporate entity and/or sitting members of their Board of Directors. This is important because litigation frequently is the first indicator of financial trouble or an impending operating default.

Personal and Professional Develeopment

The journey at CTOS Basis was an incredible learning opportunity and a great opportunity to make a connection between learning and industry. Under Ms Ming's guidance, I refined my analytical skills, built a keen eye for detail, and honed my pressure cooking skills when it comes to complex corporate profiles and bulk data requests. Plus, working closely with operations analysts, researchers and management gave me a firsthand look at how a large corporate credit bureau operates, which was an invaluable basic introduction to a finance and data analytics-based career.

TRAINING REFLECTION

Start

Besides my daily tasks, my 24 week internship with the CTOS Basis gave me a full experience in the company's team bonding and work culture. I have been able to make my friendships, work on my soft skills and understand the vision from our corporate leadership.

1. Sports Engagement

The First CTOS Pickleball BattleThe first social event I can recall while I was in training was the first-ever CTOS Pickleball Battle at The Kitch'n Club in Kota Damansara. This was a very special corporate tournament involving 48 entries split up into 24 doubles teams from all areas of the company.To play on court with staff and compete against other departments was a great team building and friendly competition exercise. It was an incredibly energetic atmosphere, with intense rallies and lots of laughter, as colleagues from different departments cheered each other on. Though we didn't get in the top three (we were beaten by the winning teams Bola Goreng, C1 and Supering, it was a great learning experience about how to work together as a team and a way to build my internal network by meeting a lot of new people throughout the company.

2.Hari Raya and the Connect Townhall.

Cultural Festivities: Hari Raya Celebration & Connect Townhall.I also got to enjoy myself with the CTOS office's Hari Raya Celebration which was right at their office. This was an outstanding display of Malaysian hospitality and inclusiveness in the workplace. Having a day away from the database pipelines was very rewarding, and we celebrated with the whole department, enjoying many of the traditional Hari Raya foods.The event was co-located with the Raya Meraya Celebration Townhall and part of a larger series of Townhalls and Awards called CTOS Connect. I was able to observe the company's motivation and support culture firsthand during the town hall by witnessing the many internal awards they give to their top employees.

TRAINING REFLECTION

Start

3. Coffee with GCEO Ankur.

One of the most exciting aspects of my personal and professional growth has been the opportunity to attend the Coffee with GCEO Ankur. programme that provided me with a small group, informal setting to have a conversation with the Group Chief Executive Officer Mr. Ankur Sehgal, during coffee, tea and snacks.

In this discussion, the GCEO openly shared a 3-year strategic roadmap of CTOS, sharing the company's technological trajectory, target market milestones and plans for its direction. I learned a tremendous amount of business knowledge from listening to the top leader of a major public listed company (PLC) breaking down long term business strategies beyond what I could get from a classroom environment.

SWOT ANALYSIS

Start

1

4

THREATS

1. **Strong Competitor**
2. **Tightening Data Privacy Laws**

SWOT ANALYSIS

Start

STRENGTHS

1. **Market Leadership**

CTOS Basis is the market leader in commercial credit risk and business intelligence and has the majority of market share for corporate verification in the B2B space in Malaysia. Its absolute strength is the strong institutional linkage it has with high ticket clients, including multinational companies (MNCs), large trade credit insurers (like Allianz Trade or Coface), large exporters and blue-chip commercial firms. These organizations rely on CTOS Basis to do the critical pre-delivery underwriting of whether a corporate buyer or new supply chain vendor is financially healthy enough to manage payment terms of 30, 60 or 90 days. This results in a very high switching cost and in an extremely sticky revenue stream as corporate credit policies, and procurement rules are explicitly based on CTOS Basis data structures like the 6Cs credit evaluation framework (Character, Capital, Capacity, Condition, Credibility, Control). Completely rewriting the corporate risk manuals, retraining procurement staff and risk losing historical risk benchmarks would be required to replace CTOS Basis. Moreover, CTOS Basis credit check APIs are directly integrated into the Enterprise Resource Planning (ERP) systems of large B2B companies. When the system is integrated, it runs on auto-pilot and transaction volume is very predictable, while business credit checks are a legal requirement in the standard process of corporate compliance audits and therefore protect CTOS Basis from economic downturns.

SWOT ANALYSIS

Start

STRENGTHS

2. **Large Pool Data**

The absolute core competitive advantage that gives CTOS Basis a competitive edge over technology startups and international competitors is its massive international and local commercial database of more than 8 million companies and business profiles. This is a very diverse data pool, which cannot be replicated in a single night and combines official regulatory data with proprietary B2B data. This data moat is based on clean and historic data from the Companies Commission of Malaysia (SSM), capital structure, shareholders and directorship networks. It's stuffed with millions of historical court filings, bankruptcy proceedings and winding-up petitions over the years, and it also includes exclusive electronic Trade References (eTR) which provide real-world payment data from local suppliers. Also, CTOS Basis facilitates local clients to have instant access to business credit reports from over 80 countries through founding membership in the business credit reporting networks such as Asiagate and the Credit Alliance. The depth of the data pool is the only factor determining the accuracy of predictions in a B2B credit analysis. The risk ratings and commercial risk classifications provided for CTOS Basis are extremely accurate, as the company has decades of connected corporate history, which a new market entrant could not develop from scratch.

SWOT ANALYSIS

Start

STRENGTHS
Recommendations

1. M**arket Leadership**

The company must transition from selling standard credit files into providing high-value subscription architectures that offer real-time algorithmic risk monitoring to lock in their client base. (Godolja & Domi, 2026).
CTOS Basis enjoys significant market share with Malaysian high profile businesses, MNCs and institutional buyers of trade credit insurance. In the past, these customers would only engage with the B2B segment in transactional mannerisms where they would "lift" a stagnant company or litigation snapshot when they onboarded new suppliers or due-diligenced large ticket contracts. Transforming this highly penetrated customer base into recurring automation programs will allow CTOS Basis to convert from unpredictable transactional income to sticky annualized software revenues. Rather than a single static snapshot, the B2B segment will be able to deploy triggers based on algorithms that feed into the customer's operational supply chain or ERP system which tracks all suppliers in their portfolio, determining changes to their corporate health scores on a real time basis. Transitioning to a subscription based model will allow CTOS Basis to retain its corporate customers by embedding themselves into the customers' everyday operations.

2. **Large Pool Data**

CTOS should deploy advanced machine learning data-fusion tools to autonomously map executive connections across fragmented judicial networks. (Scholars Digest Publishing, 2026). CTOS Basis's extensive database of over 8 million commercial profiles, decades of court litigation history, and exclusive electronic Trade References (eTR) serve as the main corporate moat protecting it from new local competitors and straightforward data aggregators.
However, legal filings, shareholder information, and winding-up petitions are dispersed among several judicial systems and register files, making raw commercial data frequently quite unstructured. These disparate data points can be automatically scanned, extracted, and joined by CTOS Basis using sophisticated machine learning-driven data-fusion techniques. Because of its computing capability, the platform can track corporate directorship networks on its own to find hidden operational risks. For example, it can identify whether a new business-to-business client is structurally connected to a sister firm that is currently involved in debt litigation.

SWOT ANALYSIS

Start

WEAKNESSES

1. **High Cost**

The group's financials show how an increasing infrastructure expense compounded with current domestic earning pressure created a different challenge for the group. Despite the overall increase in total revenue to RM326.1 million, the overall annual net profit for the group fell slightly by 7.3% to RM104.9 million, primarily owing to a drop in profits in Malaysia. This compression was primarily related to a significant increase in operating and administrative costs in the local business units, such as CTOS Basis. These are front loaded costs associated with the current shift towards “Cloud” data delivery, security and expensive skill acquisition of specialized technical staff to manage commercial data systems. These technology spendings are very expensive and disruptive in the short term and come with huge capex upfront expenditure before realizing the benefits of economies of scale, hence immediate pressure on the domestic business as a commercial operation.

2. **Too Much Manual Work**

While regular consumer credit checks can be done automatically by bank APIs, CTOS Basis is used for more complicated corporate and business intelligence in which still a lot of efforts are required to be done by hand. The system cannot simply depend on automatic algorithms when it comes to deep international reports, comprehensive litigation background checks, or “Fresh Investigation” updates for unregistered partnerships or small businesses when corporate clients make these requests. Unstructured files must be manually identified and validated, physical courtroom records retrieved, trade information matched and intricate corporate directorship relationships audited. Such human verification process slows down the speed of reporting to corporate credit managers, imposes a natural limit on the capacity for peak volumes and continues to demand more profit for the commercial report business.

SWOT ANALYSIS

Start

WEAKNESSES

Recommendation

1. **High Cost**

CTOS Basis needs to shift its primary credit databases from public cloud service (such as AWS) to its own Private Cloud to prevent paying high monthly charges for the public cloud. This is the difference between purchasing and owning their own physical computer servers, rather than renting them. Kumar (2024) says this decision is similar to house-leasing or house-buying. When you start using a public cloud, it can be easy to do, but over time, it can be very costly. This is because public cloud companies are continually increasing their rental charges and introducing hidden fees, including extra charges each time you save or move your data.

Research by Kumar (2024) shows that, on average, it costs just two to three years to break even on owning servers versus renting. The upfront cost of the hardware is paid for completely in 24-36 months, whereas with CTOS Basis, the monthly rent will be due indefinitely. After the servers are paid off, the expense for storing and searching new credit data is virtually negligible. This will eliminate erratic bills, reduce the risk of the public cloud skyrocketing prices, and retain more profit for the company's pocket.

These servers also ensure that the system runs faster and data is more secure. The databases are required to be on the go since CTOS Basis is looking to link its credit checking technology directly to clients' business computer systems on a day to day basis. If these automated scans were run 24/7 on a rented public cloud, it would result in huge additional costs. The company's tech team can deploy the servers to run at peak performance without worrying about additional charges even in peak auditing seasons. In addition, sensitive financial information is easier to stored on their own local servers enabling compliance with Bank Negara Malaysia's (BNM) stringent security and privacy regulations. The transition ensures that data is always safe, avoids unnecessary expenses, and provides CTOS Basis with a low-cost, legal, and robust platform for expansion and growth.

SWOT ANALYSIS

Start

WEAKNESSES

Recommendation

2. **Too Much Manual Work**

The commercial intelligence arm of CTOS Basis is busy with complex corporate reports and bespoke “Fresh Investigations” not served by standard banking data feeds. Financial analysts today spend a significant chunk of operational hours manually extracting unstructured legal variables from a broad spectrum of public documents, winding-up petitions and legacy Companies Commission of Malaysia (SSM) registries. By embedding AI-powered OCR frameworks directly into the document ingestion pipeline, the platform is able to instantly scan, extract and digitize textual assets from multi-format legal filings and global corporate data sets without the need for human intervention. The verification process, coupled with automated validation scripts that programmatically cross-reference these incoming data strings against live state registries, eliminates back-office human error and structurally breaks the operational logjam.

This fully automated arrangement directly reduces report generation turnaround times for enterprise clients, increases the division’s ability to process massive bulk transaction volumes during peak corporate audit seasons and systematically reduces overall labor costs

SWOT ANALYSIS

Start

OPPORTUNITIES

1. **Growing Outside Malaysia**

The volume of international corporate and cross-border B2B intelligence.The amount of information available regarding foreign companies and inter-country B2B.CTOS Basis could benefit immensely from expanding its international business report division, as it has a large opportunity to grow its revenue beyond the already established market in Malaysia. With the advent of a very Globalized trade system, local exporters as well multinational companies and international supply chain managers are seeking more and more deep credit background checks of the foreign buyers and partners. CTOS Basis is able to get credit intelligence in real-time across over 80 countries through its active memberships in top-tier networks, such as Asiagate and the Credit Alliance. This move puts the company in a position to respond to the growing need for cross-border risk management and make CTOS Basis a key tool in global trade, helping companies to manage foreign bad debt risks.

2. **Rising in Bond Demand**

The fluctuation in the global economy and geopolitical issues in key international markets, global institutional investors are turning to Malaysia as a preferred safe and stable investment base for debt products. This change sparked a huge increase in demand for Malaysian corporate bonds and fixed-income products. One of the big problems for foreign fund managers from financial hubs abroad, such as New York, London and Tokyo, is the difficulty of obtaining good, local data on credit risk and ESG scores (Environmental, Social and Governance) to assess these local bond issuers. Under local regulatory laws,

CTOS Basis is not legally allowed to award official credit ratings directly, but under the control of the parent group, CTOS Basis holds 57.68% of the total shares in RAM Holdings Berhad, the top credit rating agency in Malaysia. This strategic partnership presents an extremely attractive situation for CTOS Basis to circumvent the conventional regulatory hurdles. The companies can co-develop a complete Bond Risk and ESG Analytics Platform, which leverages CTOS's large-scale commercial data on more than 8 million business profiles and RAM's expertise in rating.

SWOT ANALYSIS

Start

OPPORTUNITIES

Recommendation

1. **Growing Outside Malaysia**

Product development should introduce cross-border business credit passports that link multi-jurisdictional legal risk and tax filing metrics smoothly (Second Talent, 2026). CTOS Basis must create specialized goods that directly address global supply chains and international trade ecosystems in order to achieve high-margin growth outside of the established Malaysian market. Although the group's operations in Indonesia and the Philippines have led to significant growth in its international business segment, traditional, disjointed country reports do not adequately handle the intricate requirements of multinational corporations overseeing cross-border credit policies. The creation of an integrated "Cross-Border Business Credit Passport" enables CTOS Basis to seamlessly integrate multi-jurisdictional lawsuit histories, regional tax disclosures, and distinct company filing records into a single, thorough international risk assessment document. The corporation may offer this unified risk profile to big trade insurers and multinational exporters by leveraging their active participation in elite regional intelligence networks such as Asiagate.

By minimizing its overall reliance on the domestic corporate lending market, this strategic product addition enables the division to take advantage of the increasing demands for global trade compliance, resulting in an increase in foreign income.

SWOT ANALYSIS

Start

OPPORTUNITIES

Recommendation

2. **Rising in Bond Demand**

To do this, CTOS must create APIs (applications programming interfaces), digital bridges between various computer databases. This API will link CTOS's data directly into global bond trading computer systems. That is, foreign investors won't need to manually look for and purchase individual PDF reports, which is a lot of time. Rather, their trading computers can instantaneously access real-time credit reports, debt levels and green (ESG) scores of Malaysian companies that issue bonds.

This is an automated system that can be accessed by these foreign investors who are based in various cities including New York, London or Tokyo, and they don't have to wait for the CTOS office to open after hours to access the bond data in Malaysia. This allows foreign buyers to quickly and conveniently determine whether or not a corporate bond is a safe investment prior to investing millions of dollars in it. Moreover, this will provide CTOS with a significant edge, as other credit bureaus continue to use outdated manual methods to transfer their data. With this modern digital bridge, CTOS is able to easily charge these international investors a monthly subscription fee, thus allowing them to enjoy a successful regular income stream with no financial risk.

SWOT ANALYSIS

Start

THREATS

1.Strong Competitor

The CTOS Basis is a leading player in the corporate business intelligence market in Malaysia, but is being challenged by strong and formidable competitors like Experian Information Services Malaysia and Credit Bureau Malaysia (CBM) who are constantly pushing into the market. When it comes to business to business (B2B) sales, corporate buyers, such as large manufacturers, trade credit insurers, and multinational corporations are constantly seeking to improve their operating costs. Key accounts might move their business elsewhere if these large-scale competitors go on a price-crushing buying spree or if they offer a good discount if they buy in bulk for their corporations. A major drawback is that corporate credit verification information is derived from some shared public registries, such as the Companies Commission of Malaysia (SSM), which means that the competitors can simply package comparable financial information, resulting in possible price war.

In addition to price competition, the competition becomes even more potent when other players launch sophisticated, digital B2B solutions. The big boys, such as Global giants like Experian have deep financial pockets internationally and have the advanced machine learning capabilities that allows them to upgrade their commercial intelligence tools incredibly quickly. As competitors develop quicker international background checks, more efficient automated supply chain risk dashboards, or improved cross-border credit reporting frameworks based on regional partnerships, CTOS Basis' pace of change will begin to lag behind. If there are volume-based revenues from commercial transactions, then a loyal migration of major business clients or small and medium enterprise (SME) subscribers to a competitor's platform would come at a direct cost to the commercial division, in terms of market share loss and loss of steady volume-based transaction revenue.

SWOT ANALYSIS

Start

THREATS
2.Tightening Data Privacy Laws

The whole corporate structure of CTOS Basis is based on the collection, cross-referencing and sharing of rich commercial data, which is a highly sensitive business to the stringent regulatory framework such as Personal Data Protection Act (PDPA) in Malaysia. With the increasing scrutiny of data governance and consumer consent requirements by governments in Southeast Asia, the boundary between public corporate information and sensitive personal identity information (PII) like that of company directors, sole proprietors, and key shareholders is continuously shifting. They mean that CTOS Basis has to keep updating its software interfaces, redoing security protocols and even adding more legal and compliance staff every day. An aggressive tightening of the regulations could limit what data non-traditional data CTOS Basis can gather, delay delivery of reports and leave the company vulnerable to having significant amounts of data mishandled or face massive statutory fines or operational disruption if any data event occurs.

SWOT ANALYSIS

Start

THREATS

Recommendations

1.**Strong Competitor**

To protect their core base, CTOS must bundle standard credit checking services with automated cloud compliance trackers and ESG health scoring suites to offer superior multi-tier value (MDPI, 2026). Profit margins would unavoidably be compressed by competing only on the unit price of a normal credit record as regional rivals like Experian and Credit Bureau Malaysia (CBM) consistently expand their corporate databases to combat CTOS Basis. Multinational businesses (MNCs), trade credit underwriters, and large enterprise clients are actively looking for methods to combine their vendor onboarding solutions in order to meet more stringent international compliance checkmarks and global sustainability criteria.

CTOS Basis provides a complete risk platform that rivals cannot match with a straightforward business history log by fusing its primary credit checks with automatic cloud compliance trackers and proactive ESG health assessments. Enterprise procurement departments may concurrently verify a vendor's financial stability, legal compliance history, and carbon or governance indicators in a single sweep thanks to this innovative product packaging that hardwires the platform directly into corporate supply chains. Offering this multi-tier value neutralizes the danger of competitor price wars and ensures long-term market dominance by making it extremely difficult for large corporate accounts to go to less expensive competitors.

THREATS

Recommendation

2.**Tightening Data Privacy Laws**
The engineering division should build encrypted, zero-knowledge data auditing nodes that preserve user privacy while maintaining full regulatory compliance (Skywork Enterprise, 2026). The expanding scope of Malaysia's Personal Data Protection Act (PDPA), which tightly regulates the handling of personal identity metrics belonging to corporate directors, shareholders, and sole proprietors, is one of the constantly changing regulatory environments that CTOS Basis' commercial reporting division must deal with. Deep credit screening and stringent consumer data privacy regulations frequently cause a structural contradiction in standard legacy data environments, requiring the business to pay high legal compliance expenses to confirm the legality of the data.

By enabling the platform's analytical engine to statistically confirm a director's credit risk, legal connections, or bankruptcy history without actually retaining or copying raw, unencrypted personal data, the deployment of encrypted, zero-knowledge auditing nodes addresses this vulnerability. By putting in place this privacy-focused backend platform, CTOS Basis is protected from the operational risk of significant data breaches or legal penalties, and internal audit times are accelerated. By guaranteeing complete systemic compliance with changing regulatory laws and maintaining quick and secure report deliveries for enterprise subscribers, this establishes the company as an unparalleled leader in digital trust.

CONCLUSION

CONCLUSION

Finally this industrial training at CTOS Basis Sdn. Bhd. has been one of the best learning experiences of my educational life. During the weeks internship, I got the opportunity to bridge the gap between what I learned in theory at Universiti Teknologi MARA (UiTM) and what I had in real working environment within the company. I gained an appreciation for accuracy, integrity, confidentiality and efficiency when managing financial and corporate information which is the basis for business decision making as an Operations Assistance Intern.

During my internship, I had a number of tasks assigned to me including: corporate data requests in bulk, database verification, legal and compliance checks of the financial statements, and processing of business credit information. These activities helped me build my technical expertise in financial analysis, analytical and problem solving abilities, and communication, teamwork and time management. In addition, I gained knowledge and understanding of organizational culture, leadership and professional ethics through corporate activities and communicating with other department staff.

The SWOT analysis in this report reveals that CTOS Basis enjoys significant competitive strengths, most notably in its strong market leadership, wide commercial database and solid reputation in the credit reporting industry. But the company also has several internal and external challenges such as a growing number of competitors, manual data processing, the changing data privacy regulations, and cost of operations. For CTOS Basis to stay competitive in the dynamic business landscape, they need to keep investing in digital transformation, automation technologies, cloud-based infrastructure, artificial intelligence, and in the development of innovative data analytics products for the B2B sector. The company should also enhance regulatory compliance, seek strategic collaborations with various parties such as RAM Holdings to access new debt and bond markets, and increase its footprint in ASEAN markets.

Overall, this internship has been great for my personal and career development and has provided me with much exposure to the industry. It has enhanced my self-esteem, my understanding of financial information management and business operation, and prepared me for future employment opportunities in the corporate risk management, business intelligence and finance fields. I can say that I am very grateful to the opportunity given by CTOS Basis and Universiti Teknologi MARA (UiTM) as it has built my ground for future learning and future career success plus I learned some useful knowledge and relevant skills for the workplace.
