BA251 - BACHELOR OF BUSINESS MANAGEMENT (HONOURED) INVESTMENT MANAGEMENT

INV 615:
FINANCIAL ENGINEERING
FTSE BURSA MALAYSIA KLCI FUTURES

PREPARED BY:

STUDENT NAME	STUDENT NUMBER
NU'MAN NABIL BIN NAZRI	2024340793
MUHAMMAD LUQMAN BIN OMAR BAKI	2024767325

CLASS:

JBA2515C

PREPARED FOR:

SIR WAN FARID WAN ZAKARIA

PHASE 2 TRADING SIMULATION (5DAYS)

Number of Contract	10 contract FKLI
Position type	Long
Duration	6 trading days including T-day – Open Position (T to T+6)
Price source	Bursa Malaysia official settlement price
Margin requirement	Must use BMDC/broker official margin

Requirement	**Description**
Initial margin	RM 4,000 X 10 = RM 40,000
Maintenance margin	RM 4,000 X 10 = RM 40,000

TABLE MARK TO MARKET FKLI

DATE	TRADE DESCRIPTION	PRIOR PRICE	CURRENT PRICE	DAILY P/L	CUMMULATIVE PROFIT LOSS	MARGIN BALANCE	CALL MARGIN	ADJUSTED MB

PROFIT				**2250**				

Table 1 Mark To Market

Reflection (1 page individual)

NU'MAN NABIL BIN NAZRI

Strategic Direction and Analytical Synthesis In Phase 1 in this project I was mainly involved in the synthesis of base and technical research in order to determine our directional perspective. The mindset needed to analyze the FKLI was to take an in-depth look into the macro economy, how changes in GDP and OPR influence the constituents of the KLCI. This drill taught me that the world of trading is no bubble; a decision to either go long or short is the result of learning about the volatility of the world and the local banking policy. I gained the importance of the so-called Weight of Evidence methodology of taking the foundational catalysts as the why, and technical signals such as the Moving Averages and the RSI, as the when. Decision Making Under Market Pressure The essence of my learning was based on the psychological part of decision-making.

The fact that I stuck to our original bearish/bullish thesis was challenged by the daily price movements of the FKLI even though I had a structured plan. I have understood that technical indicators such as Bollinger Bands are more than simple lines on the chart, but they are also a reflection of regimes of volatility in the market. When the prices reached either the top or the bottom bands, it was necessary to make a disciplined evaluation of whether the trend was either wearing out or speeding up. This project keenened my capacity to understand the concept of Volume as the establishment of strength of a particular trend that the 10 contract position is not supported by mere shift in the price.

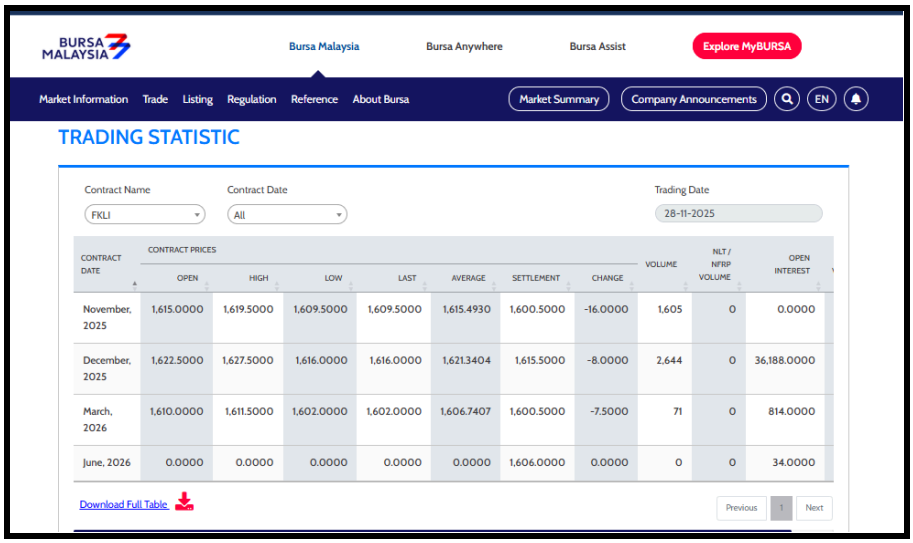

Leverage and Responsibility The biggest lesson on risk was the overwhelming force of leverage. Buying 10 contracts of FKLI implies that all the changes of the index points are multiplied. I have come to realize that leverage is a two sided sword; on the one hand it may improve returns but on the other extreme, it needs to be very analytically rigorous so that it does not lead to disastrous equity withdrawal. Thanks to my lecturer Sir Wan Farid Wan Zakaria for guiding me about this assignment.

MUHAMMAD LUQMAN BIN OMAR BAKI

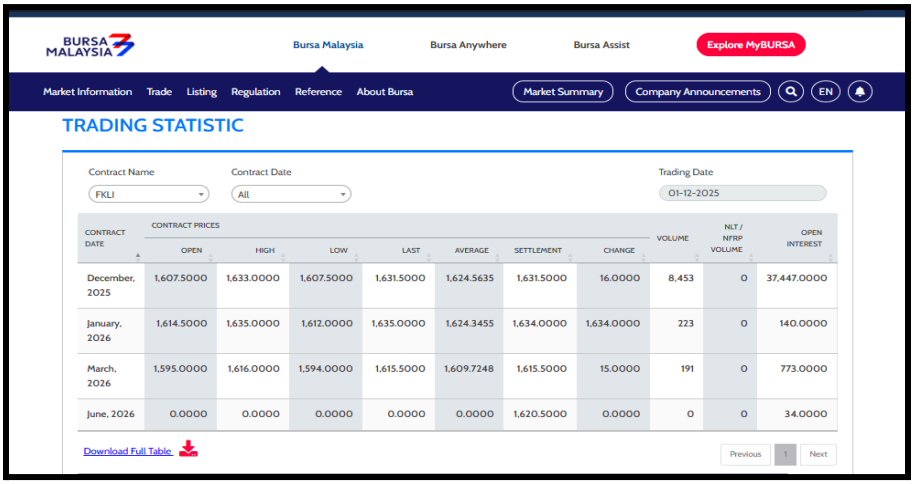

This derivatives trading simulation has contributed a significant insight into the structural dynamics and psychological requirements of the Malaysian futures. The practical exposure to the FKLI market allowed me to directly understand how the directional forecasting and the daily mark-to-market (MTM) adjustments were critical to each other. My Phase 1 study, which incorporated basic macroeconomic elements, technical trading indicators such as RSI, Bollinger Bands and news events served as the foundation of my directional perspective. But the simulation showed that even a supported bullish or bearish position has to struggle with the futures market. The biggest lesson was the existence of leverage effects due to the fact that I had to keep both initial and maintenance margins obtained either through official BMDC or broker sources

During the 5-day trading period, the need to have risk engineering was evident as I followed the daily settlement prices at Bursa Malaysia. The preparation of the margin requirements was not only a mathematical game but a game in financial discipline. Determining possible margin calls and calculating the required top ups enhanced the relevance of liquidity management in derivatives. I understood that although technical analysis software such as MACD and Moving Averages offer a roadmap, it is up to a trader to be objective in the volatility environment and follow a systematic execution plan in order to succeed. This exercise helped to fill the disconnect between the theoretical ideas in the classroom and hard reality of professional trading, creating an understanding that risk awareness is as essential as is analytical rigour to a long-term survival in the financial markets.
