1. BACKGROUND COMPANY

1.1 AMLEX HOLDINGS BERHAD

AMLEX HOLDINGS BERHAD LOGO

One of the leading companies in Malaysia that deals in manufacturing and also supplying good quality electronic components parts include Amlex Berhad. The creation of the company responded to the need for electronics in many sectors of Malaysia and also worldwide; it has built a specialized place for itself in the region by concentrating on the production of new technologies of high quality, offering timely services to the client. Amlex Berhad has connectors, terminals, and customized solution products for numerous types of applications, such as automotive and consumer electronics.

The management of Amlex Berhad has a clear vision of growing its company to a global entity through the application of skilled human resources and advancement of high tech technologies to increase its capacity to effectively and efficiently compete in Malaysia's continually evolving electronics manufacturing industry. Quality consciousness is a cornerstone of the company's operations, which ensures that all of its offerings meet specified customer demands together with other pertinent higher standards. Modern technology and efficiency in manufacturing processes are integrated by Amlex Berhad to deliver goods in line with the needs of its various customers.

Amlex Berhad is further expected to expand more rapidly and maintain dominance in the making of electronic parts production because of new partnership initiatives and continuous improvement projects. The business embraces the process of research and development so that it can cope with the modern trends as well as encourage innovation. Its priority is the customer; Amlex Berhad aims to have a huge number of customers and wants to be a company which provides solutions that enhance its competitiveness on the international level in the sphere of technology.

Other than that, Amlex Berhad prioritizes the aspects of economy and social responsibility as a corporation. The case describes that the company proves itself to reduce its environmental impact through proper management of resources and implementing proper measures. Through its policies, Amlex Berhad's makes a declaration of its commitment to reduce the impact of the future environment, and at the same time makes an affirmation of the company's efficiency in the operations as it follows environmentally friendly production as well as upholding of the global environmental standards.

1.2 TURIYA BERHAD

TURIYA BERHAD LOGO

Turiya Berhad is a leading Malaysian company that focuses on technology-driven solutions for many different kinds of industries in Malaysia. The company also is known for its creative thinking and commitment to the quality of its products. It creates innovative electronic products with modern technology to meet the constantly changing requirements of its consumer base. The company's large range covers multiple industries, such as commercial, natural, and healthcare technologies, showcasing its unwavering commitment to enhancing operating effectiveness and quality of life with technology innovation.

Turiya Berhad has made a contribution to the industrial manufacturing sector by investing in companies that generate high-quality goods and services. These investments not only help individual businesses flourish but also boost Turiya Berhad's total market presence. The company's strategic approach guarantees that its manufacturing operations are well-positioned to satisfy changing demands in both domestic and international markets.

The company itself is interested in bettering people’s lives, through future innovations in healthcare, techniques and services. To enhance the fulfillment of the increasing healthcare needs of the population in Malaysia, Turiya Berhad has strategized and adopted the use of modern developed technology in handling the healthcare services. The actions of the company in this sphere show the existence of social concern of the firm and readiness to do a good deed for people.

Environmental technology is also among the focuses of Turiya Berhad’s activities, which component is also based on the principles of sustainability. The organization designs and develops successful environmental technologies that address issues affecting the society such as disposal of wastes, control of pollution, and conservation of energy. The firm operates modern technologies for sustainability conservation with the effort of creating a sustainable environment for future generations. To be mentioned, Turiya Berhad’s goals are to maintain the leading position in technical advancement in Malaysia as well as internationally and create a culture focused on improvement and collaboration.

2.0 FINANCIAL RATIO

A financial ratio is a comparison expressed in figures arrived at by comparing figures from the balance sheet, the income statement and or the cash flow statement. These ratios all aid in evaluating the different facets of a company's financial status or performance or even its effectiveness. The following are the uses of financial ratios:

2.1 LIQUIDITY RATIOS

A liquidity ratio is a financial metric used to determine a company's ability to pay off its short-term debts and obligations with its current assets. These ratios are crucial for assessing the short-term financial health of a business. Liquidity ratios are very useful to creditors, investors, and managers to determine a company's financial solvency and operational effectiveness. They are used to understand if a company can pay its short-term debts and coordinate operations avoiding solvency problems.

2.2 ACTIVITY RATIO

An activity ratio or known as efficiency ratio looks at the efficiency of the company in utilizing its assets to produce its turnover or convert its asset to cash. These ratios give information on how a business organization undertakes its operations especially in the management of assets and conversion of sales. Activity ratios are particularly significant to determine operating efficiency and effectiveness of the firm's management. They assist to define fields, where the company can increase the efficiency of assets improving the performance in general.

2.3 LEVERAGE RATIO

A leverage ratio as a kind of the financial ratio measures the level of utilizing the borrowed fund (debt) by the company to finance its activities and expansion. These ratios offer information in regards to a firm's capital structure and its ability to finance long-term commitments. It is relevant for the evaluation of the risk and the company's solvency. Financial leverage ratios are important for determining the amount of risk and solidity of an enterprise. They enable investors, creditors and management to determine the level of indebtedness and company's ability to meet long-term financial obligations.

2.4 PROFITABILITY RATIO

A profitability ratio is an overall percentage figure used to determine the efficiency of the generation of profits in relation to the absolute sum of money of gross sales, the fixed assets, the owned equity or other elements. These ratios give information on efficiency, that is, how well a company is doing its operations, return on investment, that is the return a company's investment is generating and the general financial health of the company. Profitability ratios are crucial for investors, analysts, and management as they provide insights into a company's ability to generate profit and create value for shareholders. They help assess the efficiency and effectiveness of a company's operations and its overall financial health.

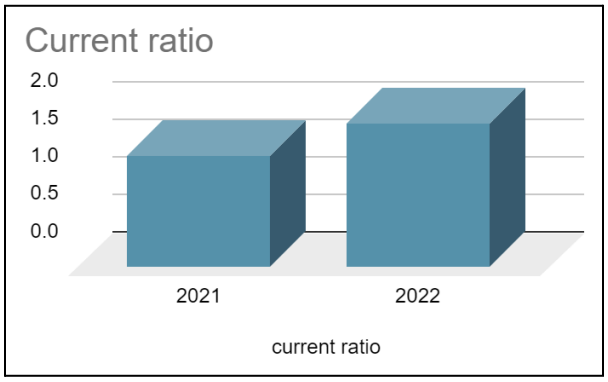

2.5 MARKET RATIO

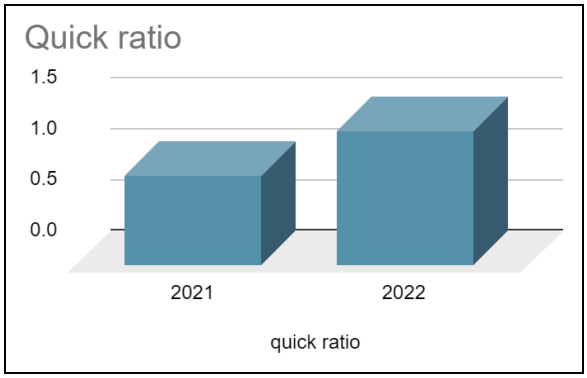

A market ratio is another name for a market valuation ratio or market multiple, which is a common measure used by investors which assesses the worth of a company's stock in the market. These ratios define how the markets analyse the financial performance, future business growth, and value in terms of earnings, book value, or any other values. Market ratios are critical indicators for investors or analysts since they offer a wealth of information concerning the business's worth or investment prospects of its share. It supports evaluating the role that market plays towards the value of the company compared to the performance and other factors.

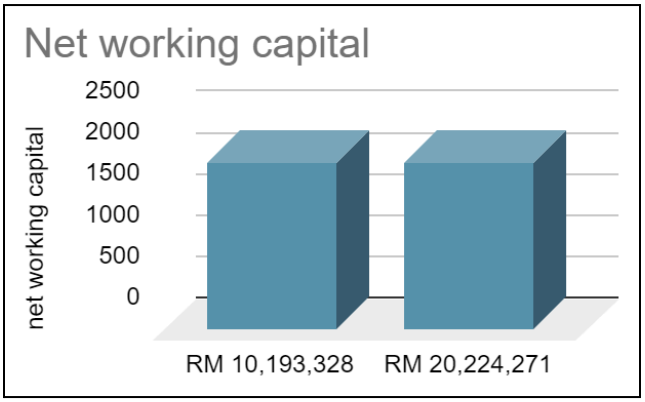

3.0 FINANCIAL RATIO ANALYSIS

3.1 LIQUIDITY RATIOS
AMLEX

RATIO	FORMULA	2021	2022	ANALYSIS
Current Ratio	= Current Assets / Current Liabilities	31,564,014 / 21,370,686 **= 1.48 times**	42,644,278 / 22,420,007 **= 1.90 times**	**GOOD**
Quick Ratio	=(Current assets - Inventory) / Current Liabilities	(31,564,014 - 12,721,872) / 21,370,686 **= 0.88 times**	(42,644,278 - 13,375,290) / 22,420,007 **= 1.31 times**	**GOOD**
Net Working Capital	= Current Assets - Current Liabilities	31,564,014 - 21,370,686 **= RM 10,193,328**	42,644,278 - 22,420,007 **= RM 20,224,271**	**GOOD**

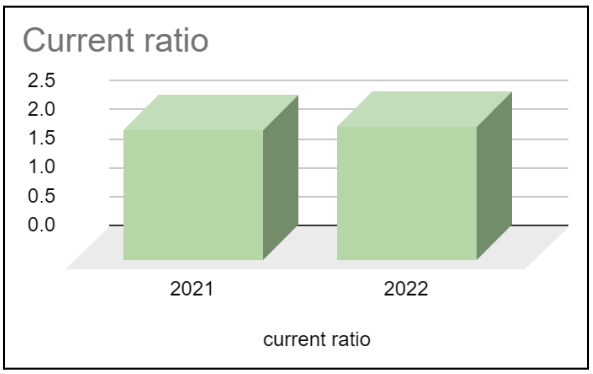

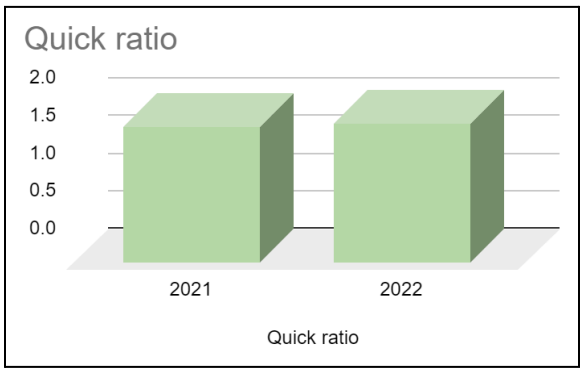

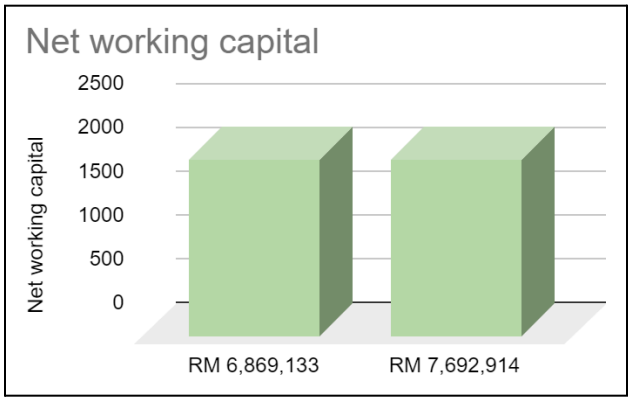

TURIYA

RATIO	FORMULA	2021	2022	ANALYSIS
Current Ratio	= Current Assets / Current Liabilities	12,369,807 / 5,500,674 **= 2.25 times**	13,558,704 / 5,865,790 **= 2.31 times**	**GOOD**
Quick Ratio	=(Current assets - Inventory) / Current Liabilities	(12,369,807 - 2,510,043) / 5,500,674 **= 1.79 times**	(13,558,704 - 2,761,468) / 5,865,790 **= 1.84 times**	**GOOD**
Net Working Capital	= Current Assets - Current Liabilities	12,369,807 - 5,500,674 **= RM 6,869,133**	13,558,704 - 5,865,790 **= RM 7,692,914**	**GOOD**

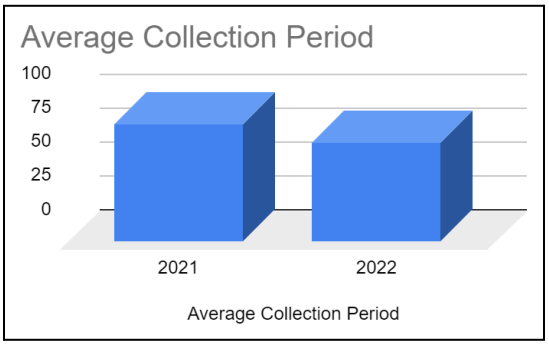

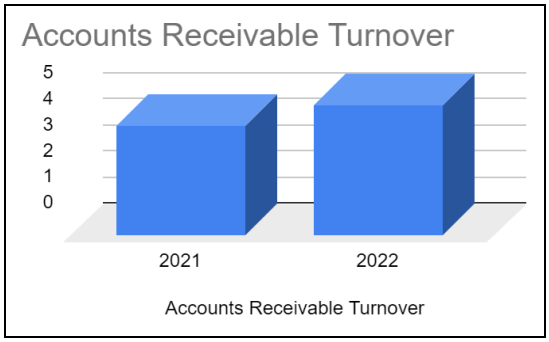

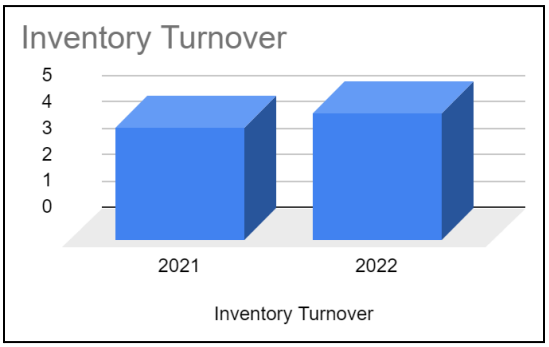

From the chart we can see above, Amlex shows a significant improvement in managing short-term debt from 2021 to 2022, with its current ratio increasing from 1.48 to 1.90 times and its quick ratio improving from 0.88 to 1.31 times. This shows a reduction that depends on inventory and a strong doubling of net working capital to RM 20,224,271. Additionally, Turiya company has consistently maintained a higher liquidity ratio, with its current ratio steadily increasing from 2.25 to 2.31 times and its quick ratio remaining strong between 1.79 and 1.84 times.In addition, Amlex's significant increase in liquidity metrics shows its increased ability to handle short-term obligations and increase financial reserves for their company.

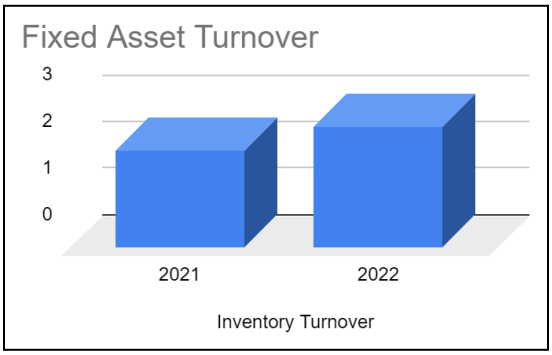

3.2 ACTIVITY RATIOS
AMLEX

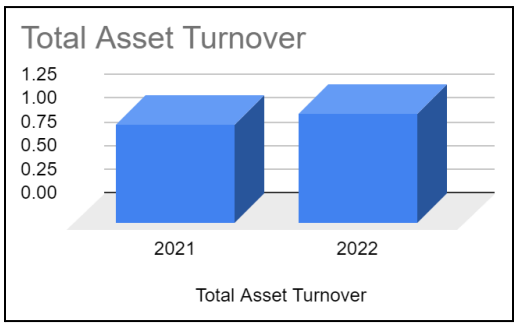

RATIO	FORMULA	2021	2022	ANALYSIS
Average Collection Period	Acc Receivable / Net Sales x 360	15,628,639 / 65,253,571 **= 86.22 days**	17,174,731 / 85,437,185 **= 72.37 days**	**GOOD**
Accounts Receivable Turnover	360 / Average Collection Period	360 / 86.22 **= 4.18 times**	360 / 72.37 **= 4.97 times**	**WORSE**
Inventory Turnover	COGS / Inventory	54,033,504 / 12,721,872 **= 4.25 times**	64,097,890 / 13,375,290 **= 4.79 times**	**GOOD**

Total Asset Turnover	Net Sales / Total Assets	=65,253,571 / 62,722,294 **=1.04 Times**	=87,437,185 / 76,285,986 **=1.15 Times**	**GOOD**

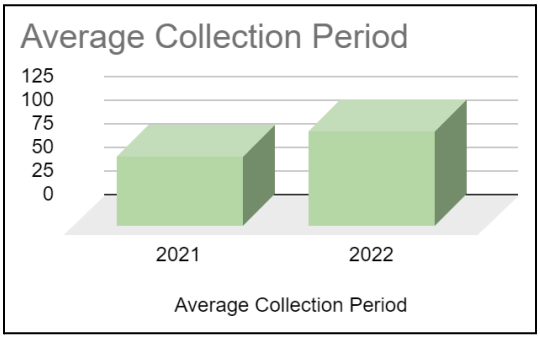

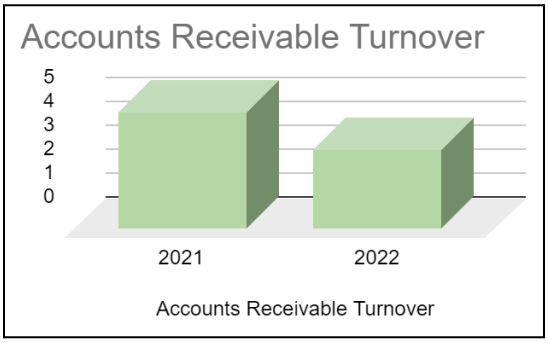

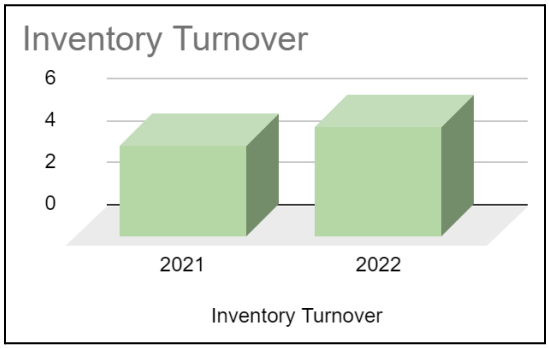

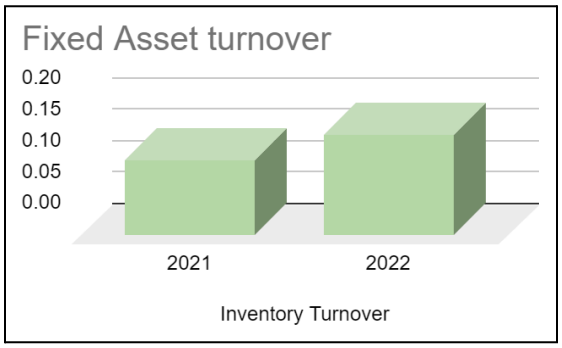

TURIYA

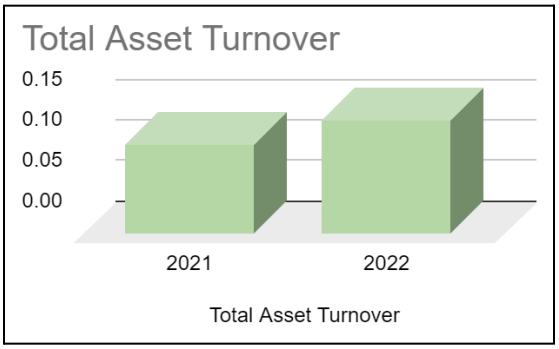

RATIO	FORMULA	2021	2022	ANALYSIS
Average Collection Period	Acc Receivable / Net Sales x 360	3,860,2761 / 8,919,074 **=73.45 Days**	7,365,781 / 24,483,178 **=108.31 Days**	**WORSE**
Accounts Receivable Turnover	360 / Average Collection Period	360 / 73.45 **= 4.9 times**	360 / 108.31 **= 3.32 times**	**WORSE**
Inventory Turnover	COGS / Inventory	10,820,683 / 2,510,043 **=4.31 Times**	14,458,462 / 2,761,468 **=5.24 Times**	**WORSE**
Fixed Asset turnover	Net Sales / Net Fixed Assets	18,919,074 / 156,661,019 **=0.12 Times**	24,483,178 / 156,238,302 **=0.16 Times**	**GOOD**
Total Asset Turnover	Net Sales / Total Assets	18,919,074 / 169,030,826 **= 0.11 times**	24,483,178 / 169,797,006 **=0.14 Times**	**GOOD**

By looking at the table above, the Amlex company shows significant progress in its activity ratio from 2021 to 2022. The company reduced its day period from 86.22 days to 72.37 days. This clearly shows a faster recovery in converting accounts receivable to cash. These improvements suggest more effective credit management and improved cash flow for the Amlex company. Additionally,we can see to Amlex its accounts receivable turnover ratio, up slightly from 4.18 times to 4.97 times.

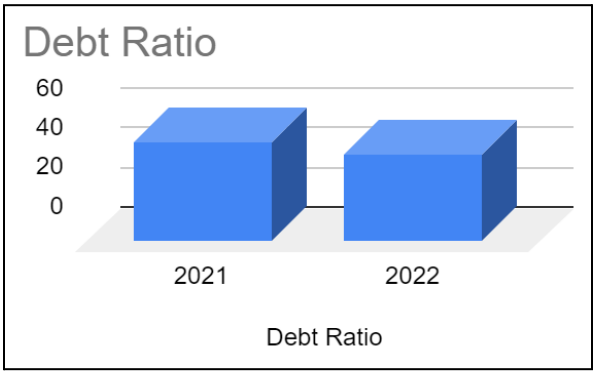

In terms of inventory management, Amlex also showed a positive performance with its inventory turnover ratio increasing from 4.25 times to 4.79 times. This means that the company manages its inventory more efficiently, reducing holding costs and potential obsolescence. Furthermore, Amlex improved its fixed asset turnover from 2.09 times to 2.60 times, indicating better utilization of its fixed assets to generate sales revenue.

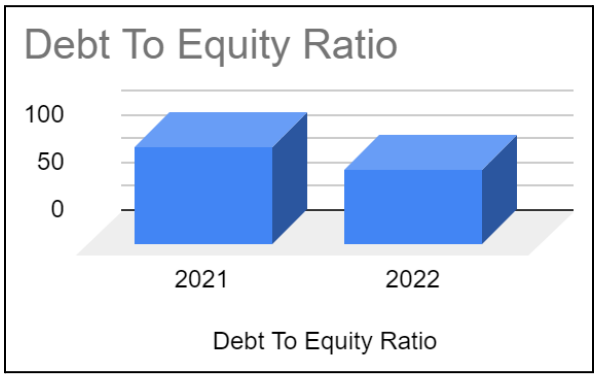

Turiya faced challenges in its activity ratio, with a longer average collection period (increased from 73.45 to 108.31 days), slower accounts receivable turnover (decreased from 4.90 to 3.32 times), and worsening inventory turnover (increased from 4.31 to 5.24 times). This shows the difficulty in managing cash flow and handling inventory efficiently.

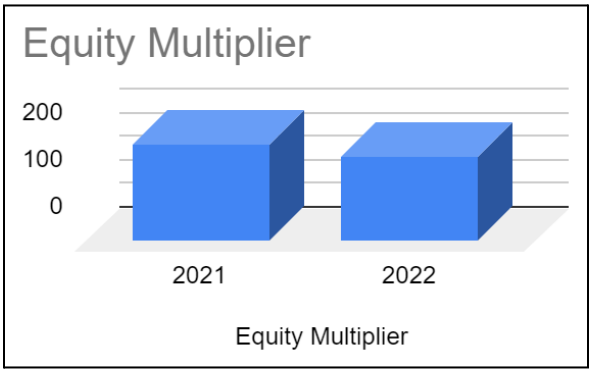

Overall, Amlex improvement focus in activity ratios indicates solid operational management and readiness for growth, while Turiya's challenges in certain ratios suggest areas for targeted improvement to strengthen its operational efficiency and financial performance.

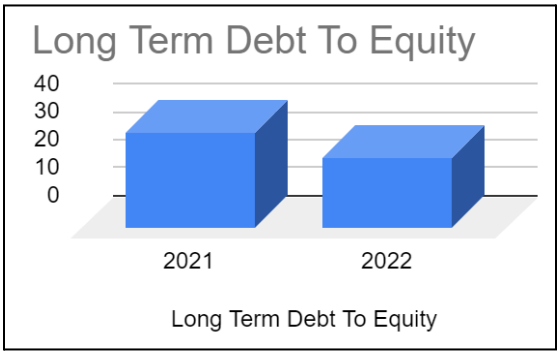

3.3 LEVERAGE RATIO
AMLEX

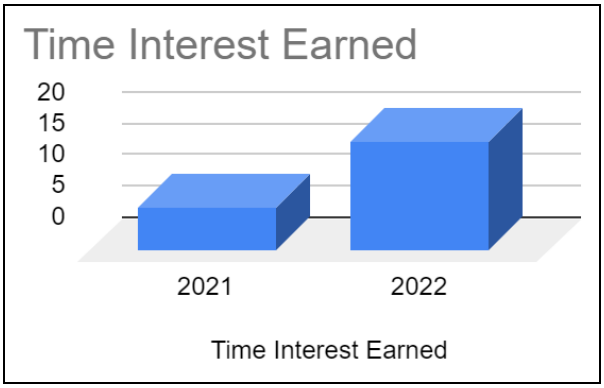

RATIO	FORMULA	2021	2022	ANALYSIS
Debt Ratio	Total Liabilities x 100 Total Assets	31,897,294 x 100 62,722,294 **= 50.85%**	33,674,799 x 100 76,285,986 **= 44.14%**	**GOOD**

Based on the provided information about the Leverage Ratios for TURIYA and AMLEX in 2021 and 2022, we are finally able to conclude which company performs the best and worst in terms of financial position.

These two companies show positive signs on their financial performance. First, for TURIYA, their Debt Ratio and Debt to Equity Ratio both decreased slightly in 2022, meaning that they have a lower reliance on debt. The Long Term Debt to equity is also decreasing, suggesting a smaller portion of long term maturing debt.

For AMLEX, all their Leverage Ratios decreased drastically in 2022. This shows a substantial reduction in debt reliance and improvement in their financial structure.

After comparing both companies, we can conclude that AMLEX shows an obvious improvement in their financial position based on Leverage Ratios. The significant decrease suggests that AMLEX is becoming less risky and also relying less on debt to be able to finance their operations while TURIYA shows a slightly improved financial position, the changes are less substantial. In conclusion, AMLEX appears to be in a better financial position compared to TURIYA.

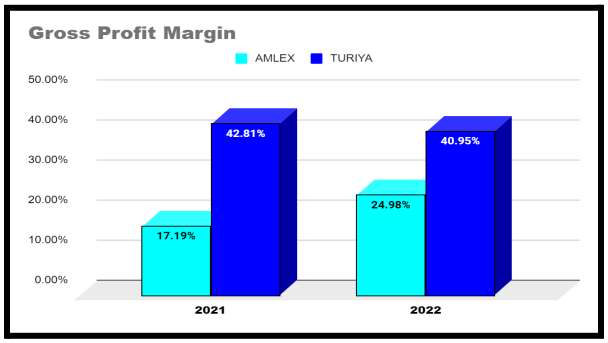

3.4 PROFITABILITY RATIO

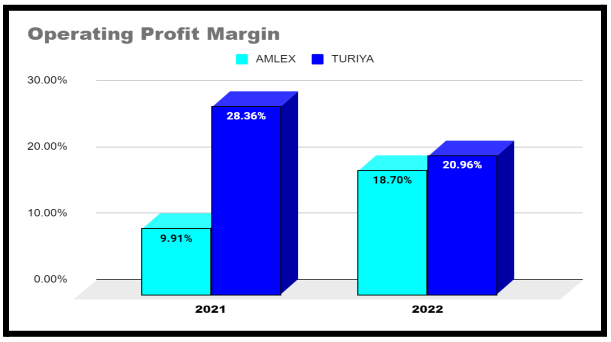

AMLEX

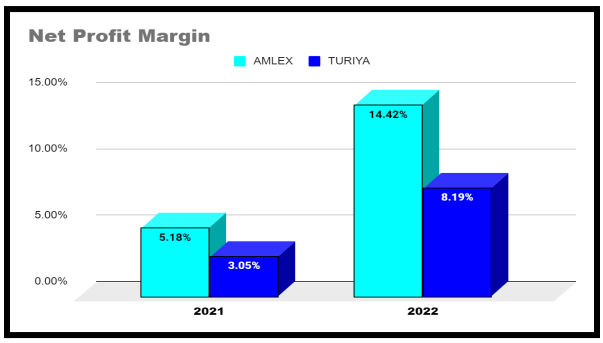

RATIO	FORMULA	2021	2022	ANALYSIS
Gross Profit Margin	=Gross Profit / Sale X 100	=11,220,067 / 65,253,571 **=17.19%**	=21,339,295 / 85,437,185 **=24.98%**	**GOOD**
Operating Profit Margin	=Operating Profit / Sale X100	=6,463,509 / 65,253,571 **=9.91%**	=15,979,269 / 85,437,185 **=18.70%**	**GOOD**
Net Profit Margin	=EAT/Sales X 100	= 3,380,792 / 65,253,571 **=5.18%**	=12,322,413 / 85,437,185 **=14.42%**	**GOOD**
Return On Equity	= EAT / Total Equities X 100	=3,380,792 / 30,825,000 **=10.97%**	=12,322,413 / 42,611,187 **=28.92%**	**GOOD**
Return On Asset	= EAT / Total Assets X 100	=3,380,792 / 62,722,294 **=5.39%**	=12,322,413 / 76,285,986 **=16.15%**	**GOOD**

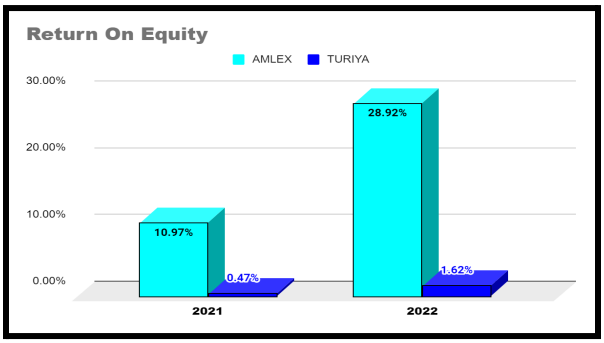

TURIYA

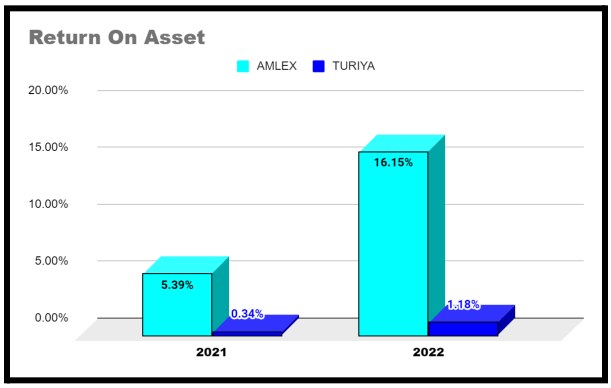

RATIO	FORMULA	2021	2022	ANALYSIS
Gross Profit Margin	=Gross Profit / Sale X 100	= 8,098,391 / 18,919,074 **=42.81%**	=10,024,716 / 24,483,178 **=40.95%**	**WORSE**
Operating Profit Margin	=Operating Profit / Sale X100	=5,365,409 / 18,919,074 **=28.36%**	=5,131,691 / 24,483,178 **=20.96%**	**WORSE**
Net Profit Margin	=EAT/Sales X 100	= 577,365 / 18,919,074 **=3.05%**	=2,006,317 / 24,483,178 **=8.19%**	**GOOD**
Return On Equity	= EAT / Total Equities X 100	= 577,365 / 121,865,260 **=0.47%**	= 2,006,317 / 123,936,590 **=1.62%**	**GOOD**
Return On Asset	= EAT / Total Assets X 100	= 577,365 / 169,030,826 **=0.34%**	= 2,006,317 / 169,797,006 **=1.18%**	**GOOD**

Based on the analysis of the provided information about the Profitability Ratios for TURIYA and AMLEX in the year 2021 and 2022, we can make a conclusion about the financial performance and position of both companies. When analyzing Gross Profit Margins, it becomes obvious that AMLEX consistently generates higher margins across the board. This shows AMLEX was more excellent at converting sales into profits and at every stage of their operations. Moreover, AMLEX's Return On Equity was significantly higher, meaning that they were able to generate more profits from the investment of the shareholder compared to TURIYA. Additionally, AMLEX also had a higher Return On Assets indicating their superior capability of utilization of assets to generate profits.

On the other hand, while TURIYA's Profit Margins indicate a potential advantage in terms of pricing strategy or production cost, it is important to note that AMLEX's excellent performance in all other key metrics shows a greater overall effectiveness in managing expenses and generating profits throughout 2022. This analysis indicates that despite some isolated strength, TURIYA was outperformed by AMLEX in terms of financial efficiency and profitability during the period.

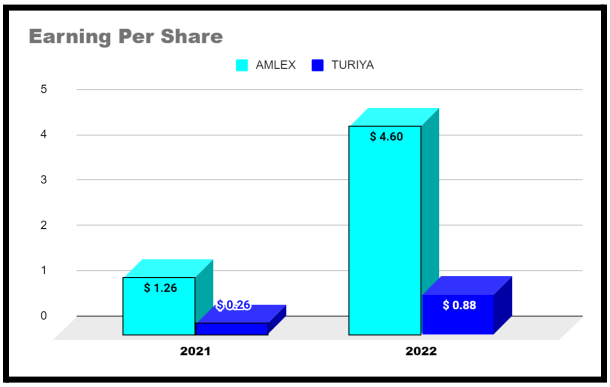

3.5 MARKET RATIO

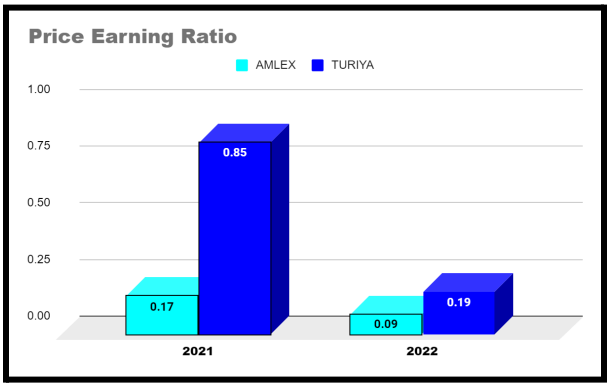

AMLEX

RATIO	FORMULA	2021	2022	ANALYSIS
Earning Per Share	= Net Income - PS Dividend / No of Common Shares Outstanding	**1.26 Sen**	**4.60 Sen**	**GOOD**
Price Earning Ratio	= Price Per Share / Earning Per Share	= 0.2150 / 1.26 **=0.17**	=0.4250 / 4.60 **=0.09**	**WORSE**

TURIYA

RATIO	FORMULA	2021	2022	ANALYSIS
Earning Per Share	= Net Income - PS Dividend / No of Common Shares Outstanding	**0.26 Sen**	**0.88 Sen**	**GOOD**
Price Earning Ratio	= Price Per Share / Earning Per Share	= 0.2200 / 0.26 **=0.85**	=0.1700 / 0.88 **=0.19**	**WORSE**

The chart above shows that there are two companies, namely Amlex and Turiya. We can clearly compare the nature of the market ratio of Amlex and Turiya, differences and significant trends appear. Amlex has shown a high increase in Earnings Per Share (EPS), increasing from 1.26 Sens in 2021 to 4.60 Sens in 2022. This high increase in (EPS) indicates that the company is earning good profits in the future. However, Amlex's Price Earnings Ratio (P/E Ratio) has declined from 0.17 to 0.09 over the same period, suggesting potential upside for the stock relative to earnings, which may warrant caution regarding valuation.

Next is, Turiya has also shown a very good and positive growth in EPS, despite the fact that it is lower than Amlex, but its EPS has also increased from 0.26 Sen in 2021 to 0.88 Sen in 2022. Turiya's P/E ratio has decreased significantly from 0.85 to 0.19, indicating it is better than Amlex. An improvement in these valuation metrics has the potential to increase Turiya's appeal to investors looking for the stock. Overall, while Amlex shows strong EPS growth compared to Turiya, investors may consider Turiya's improved valuation metrics to indicate a potentially more attractive investment opportunity based on current earnings performance.

4.0 CONCLUSION

AMLEX BERHAD

Therefore, based on the financial performance indices of Amlex in 2021 and 2022 various conclusions can be made about the company's path. Another positive fact is that Amlex has expanded its EPS, thereby pointing to high profitability during the year and reaching the level of 4.60 Sens starting from 1.26 Sens. While this improvement of the earnings per share is good for the firm, we observe the decrease of the Price Earnings Ratio (P/E Ratio) from 0.17 to 0.09 which also has a negative sign and could mean that the investor is not willing to pay the same for the stock as before. But, as it can be seen in the case of Amlex, liquidity has improved immensely; the current ratio has increased from 1.48 to 1.90, and the quick ratio from 0.88 to 1.31. These changes indicate improved control of short-term liabilities and enhancements in the company's financial health. Next, the overall operation efficiency has come with better activity ratios principally illustrated by shortened average collection periods and enhanced inventory turnover ratio of Amlex. Altogether, when it comes to the company's valuation, there are some essential factors to focus on: All in all, despite the fact that Amlex some of investors became cautious about some of the valuation factors, the firm has shown improved performance in profitability, operating cash flows and liquidity from the year 2021 to 2022.

TURIYA BERHAD

The analyzed financial performance for Turiya in 2021 and 2022 reveal several trends and conclusions by disaggregating it in terms of general performance of the firm. Nevertheless, Turiya has been in a sound liquidity health as measured here by slight improvement in the current and quick ratios that chiefly testify to the ability to meet short-term debts. But, in some cases, it has shown weakness in controlling its activity ratios such as the rise in the average collection period and a reduced inventory turnover which if exacerbated may pose a threat to the company's cash and operating efficiency. As for the solvency aspects, either stability or improvement in the field of leverage ratios can be observed which points to its desired balance of debts and equities. Profitability metrics present a mixed picture: The Net Profit Margin, which shows the company's ability to control its expenses in relation to its sales has become much better, yet Gross Profit Margin and Operating Profit Margin depreciated, which can signal deterioration in costs or, possibly, the company's operational efficiency. The overall market ratios indicate slightly higher Earning Per Share (EPS) than the preceding year, but lower P/E Ratio which can be interpreted as; market has both positive and negative perception or overall market is overvalued or undervalued. In summary, Turiya has some advantages that can be seen in the relatively stable financial performance and increasing earnings as compared to operations, but some critical issues regarding the company's operational efficiency and market reputation appear critical areas that require specific attention to search for an enduring acceleration in performance.

5.0 RECOMMENDATION

AMLEX BERHAD

The following recommendations can be suggested based on the Amlex Berhad financial performance analysis for 2021 and 2022, which will bring beneficial changes to the company's financial status. While EPS grew crazy and spiked, P/E Ratio declined showing that investors have become rather conservative about the valuation of the shares. To the external stakeholders, specifically the investors, Amlex should focus on improving the investor confidence through accurate and clear financial statements, clear communication of the growth plans, and possibly going for activities such as share buyback or paying dividends to the shareholders. In addition, betterment of other solvency measures including current ratio and quick ratio can be viewed as evidence of the improved solvency. These should be sustained at Amlex through strict control of short-term liabilities and impeccable working capital management. Following up on such operational improvements as defined by decline in average collection period and inventory turnovers, there is need for efficient supply chain systems and inventory control systems to improve on the cash flow and operational costs. Improve the technological aspect and use the new potential of the field, which will be vital for maintaining profit and developing in the future. Finally, it develops sound risk management as well as improves the corporate governance standards in order to effectively withstand fluctuating market conditions, thus solidifying its credibility to all stakeholders. Due to the identification of those areas, it would be possible to establish that Amlex Berhad would have vast opportunities for the improvements of its financial standing as well as for the enhancement of its long term performance in the given environment.

TURIYA BERHAD

As derived from the analysis of the financial position of Turiya, certain recommendations should be made in order to strengthen the financial status of the firm in future. Firstly, Turiya needs to focus on the improvement of operation activity by the better management of inventory and increasing the speed of receivables collection. More proof is a straightforward conclusion that the proper organization of supply chain and credit management activities can help increase cash flow and operational efficiency. Second, it is crucial to have intense cost control strategies to avoid the slight reduction of GP Margin and Operating Profit Margin, still noted previously. This involves working on such pertinent questions as the extent of cost optimisation in the production process, better deals in suppliers and outsourcing, the other ways of improving organizational efficiency while not detrimentally affecting the quality of product. Third and lastly, both Turiya should engage more in the issue of enhancing the market perception or investor confidence. It is therefore important for the management of the company to enhance the understanding of strategic plans, positive changes on the company's financials and strengths in order to enhance the P/E Ratio and market outlook. Further, expanding technological advancements and pushing innovations for improved organizational efficiency and new products would be impactful in the fight against dwindling competitiveness and failure to meet clients' needs. Opportunities available for the actualisation of more revenues, which can be achieved by

diversification through introduction of new product lines or expanding the outlets the firm's products reach may also reduce market risks. Finally, the adoption of sustainable practices to business activities as a strategy serves to support Turiya's brand image besides appealing to the socially conscious investors. With the help of the recommendations outlined above, Turiya will be able to improve its financial condition, provide for organic development, and be ready for potential future problems.
