INTRODUCTION

My Job Title: Operations Assistance Intern at Ctos Basis

- Department Level: CTOS Basis (Focused on SMEs and Big Companies in Malaysia & Singapore).
- My Core Task Description: Providing analytical and operational data assistance to fuel the core CTOS database. My daily workflow demands an absolute, relentless attention to detail to ensure zero data-entry error rates.

TRAINING REFLECTION

- Financial Statement Entry, Extracting raw data from audited financial reports specifically Profit & Loss P&L, Balance Sheets, and Cash Flow statements.
- Database Entity Verification, Conducting routine checks on the database to identify and cross-reference existing companies, ensuring no duplicated or mismatched corporate profiles exist.
- Legal & Compliance Auditing. Checking corporate records to identify, flag, and record any legal charges or ongoing active litigations filed against the company or members of its Board of Directors .
- Handling Bulk Orders. Coordinated large-scale data pipelines for institutional clients requiring hundreds of credit background checks simultaneously.

CTOS BASIS

- **Ctos Basis is subsidiary under Ctos Data System**

CTOS Basis operates as a Business-to-Business (B2B) Service Provider. It is a fully-owned subsidiary of CTOS Digital Berhad, specialized in delivering global commercial credit information, company reporting, and localized risk analytics. The company specifically concentrates on helping financial institutions, large corporations, and SMEs evaluate trading risks across Malaysia and Singapore.

- **Mission**

To empower individuals and businesses to make fast, confident credit decisions through data insights, driving better financial health.

- **Vision**

To establish Malaysia as the ASEAN center of excellence and a leading regional hub for credit reporting.

MY POSITION

PRODUCT AND SERVICES CTOS BASIS

- Company Search
- Litigation Check
- International Credit Report
- Business Report

- Credit Bureau
- Credit Monitoring
- Reinforce Good Payment
- Business Listing

- Malaysia Credit Report

SWOT ANALYSIS

2026

Strength

1. Market Leadership
2.Large Data Pool

Weaknesses

1.High Costs
2.Too Much Manual Work

Opportunities

1.Growing Outside Malaysia
2.Rising In Bond Demand

Threats

1.Strong Competitor Penetration
2.Tightening Data Privacy Laws

SWOT ANALYSIS AND RECOMMENDATION

2026

STRENGTHS

1. Market Leadership

1. CTOS holds an overwhelming domestic market share of over 70% in Malaysia
2. This dominant position forms a massive economic barrier that makes it highly difficult for competitors like Experian to poach clients.

Recommendations

The company must transition from selling standard credit files into providing high-value subscription architectures that offer real-time algorithmic risk monitoring to lock in their client base. (Godolja & Domi, 2026).

2.Large Data Pool

1. The company manages a massive database tracking roughly 15 million consumers and 8 million corporate business entities.
2. The system uniquely links corporate financial records directly to the personal litigation history of a company Board of Directors.

Recommendations

CTOS should deploy advanced machine learning data-fusion tools to autonomously map executive connections across fragmented judicial networks. (Scholars Digest Publishing, 2026).

SWOT ANALYSIS AND RECOMMENDATION

2026

WEAKNESSES

1.High Costs

1. The company brought in a record RM326.1 million in total money,but spending on new technology and cloud storage lowered their actual profits.
2. They must continue to spend heavily on technology infrastructure to keep up with incoming data demands.

Recommendations

CTOS should transition its core databases to a dedicated private cloud storage environment a strategic ownership model that Kumar (2024) demonstrates mathematically pays for itself within just two to three years compared to public cloud leasing.

2.Too Much Manual Work

1. The company still spends a lot of money on manual labor. Workers have to manually type in and double check business financial paperwork into the system database.
2. This manual entry workflow takes a lot of time and increases internal business costs

Recommendations

Integrating advanced optical character recognition (OCR) engines alongside automated validation scripts removes data-entry bottlenecks and minimizes corporate overhead. (Baker Tilly, 2026).

SWOT ANALYSIS AND RECOMMENDATION

2026

OPPORTUNITIES

1.Growing Outside Malaysia

Selling data and credit scores in Indonesia and the Philippines is going very well.

Expanding across these dense ASEAN regions opens up a massive audience of millions of new digital bank users.

Recommendations

Product development should introduce cross-border business credit passports that link multi-jurisdictional legal risk and tax filing metrics smoothly. (Second Talent, 2026).

2.Rising in Bond Demand

1. Global conflicts and market worries are pushing international investors to buy stable Malaysian bonds.
2. Since CTOS cannot legally rate bonds themselves, they can partner with RAM Holdings (a top rating firm they own a stake in) to sell a new Bond Risk and ESG Analytics Platform.

Recommendations

Teams should deploy customizable, plug-and-play API endpoints that integrate seamlessly with digital enterprise resource planning (ERP) systems. (Mindsprint, 2026). This API will link CTOS's database directly into international bond trading systems.

SWOT ANALYSIS AND RECOMMENDATION

2026

THREATS

1.Strong Competitor Penetration

1. Global credit reporting giants like Experian pose a severe, continuous threat to CTOS's domestic consumer base.
2. These international rivals aggressively target local SME accounts using deep price-cutting strategies and automated scoring software.

Recommendations

To protect their core base, CTOS must bundle standard credit checking services with automated cloud compliance trackers and ESG health scoring suites to offer superior multi-tier value. (MDPI, 2026).

2.Tightening Data Privacy Laws

1. Sudden external changes to national Personal Data Protection Act (PDPA) frameworks present strict compliance hurdles.
2. New legal restrictions regarding how public courts share active litigation or bankruptcy records could choke vital corporate data pipelines.

Recommendations

The engineering division should build encrypted, zero-knowledge data auditing nodes that preserve user privacy while maintaining full regulatory compliance. (Skywork Enterprise, 2026).

CONCLUSION

2026

In conclusion, my internship at CTOS Basis Sdn. Bhd. successfully bridged the gap between my academic theory at Universiti Teknologi MARA (UiTM) and real-world corporate execution. As an Operations Assistance Intern, managing critical tasks like financial statement auditing, bulk data verification, and compliance checks directly enhanced my technical financial analysis capabilities while sharpening my problem-solving and communication skills.

The SWOT analysis highlights that while CTOS Basis maintains a powerful data moat and dominant market leadership, it must proactively address rising operational costs and manual bottlenecks. To sustain this competitive edge, the company should accelerate its digital transformation by investing in serverless cloud infrastructure, AI-driven OCR automation and expanding across the ASEAN region.

Ultimately, this industrial training has provided invaluable industry exposure, improved my corporate confidence, and equipped me with the essential workplace competencies required to excel in the fields of corporate risk management, business intelligence, and finance.
